Drinking-Water Systems Regulation O. Reg. 170/03

Describe your Drinking-Water System

Two well groundwater system with submersible pumps ultra violet light for primary disinfection and sodium hypochlorite for secondary disinfection. Well #3 (Crookston) has a nitrate uranium removal system (ion exchange). The facility is equipped with on-line, alarmed continuous monitoring for treated water free chlorine residual and turbidity and distribution system free chlorine residual. The facility also contains a well pump lock out system in the case of disinfection failure. Well #1 (Main) has not been in production during the reporting period, however it can be brought on-line in the case of an emergency/stand-by in the event that the production well is out of service.

List all water treatment chemicals used over this reporting period

Sodium Hypochlorite – 12%	
Sifto Salt (Ion Exchange Resin)	

Were any significant expenses incurred to?

- [X] Install required equipment
- [X] Repair required equipment
- [X] Replace required equipment

Please provide a brief description and a breakdown of monetary expenses incurred

- TROJAN B SERIES ULTRA VIOLET LAMPS
- FREE CHLORINE SENSOR
- FLOW METER CALIBRATIONS
- ANNUAL INSPECTION OF DIESEL GENERATORS
- FLOW METER.
- SUPPLY & INSTALL NEW UNINTER UPTED POWER SUPPLY FOR TOWER.
 COMMUNICATIONS
- UV CALIBRATIONS
- OVERRIDE BUTTON
- POST CL2 LOCK OUT
- HIGH PRESSURE LOCK OUT
- CHART RECORDER
- INSTALL SURGE PROTECTION & LIGHTENING ARRESTORS

Provide details on the notices submitted in accordance with subsection 18(1) of the Safe Drinking-Water Act or section 16-4 of Schedule 16 of O.Reg.170/03 and reported to Spills Action Centre

NOTE: For continuous monitors use 8760 as the number of samples.

NOTE: Record the unit of measure if it is not milligrams per litre.

^{*} Please note: instrument spikes and dips recorded by on-line instrumentation were a result of air bubbles and various maintenance and calibration activities. Power interruptions may also cause an instrument reading to drop to zero. All events are reviewed for compliance with O. Reg. 170/03 and if warranted, are reported to the Ministry of Environment as Adverse Water Quality Incidents.

SUMMARY REPORTS FOR MUNICIPALITIES

Report

This report is a summary of water quality information for the Tweed Well Supply System published in accordance with Schedule 22 of Ontario's Drinking-Water Systems Regulation for the reporting period of January 1, 2009 to December 31, 2009. The Tweed Well Supply System is categorized as a Large Municipal Residential Drinking Water System.

This report was prepared by the Ontario Clean Water Agency on behalf of the Corporation of the Municipality of Tweed.

Who gets a copy of the Report:

- in the case of a drinking-water system owned by a municipality, the members of the municipal council:
- in the case of a drinking-water system owned by a municipal service board established under section 195 of the Municipal Act, 2001, the members of the municipal service board; or
- in the case of a drinking-water system owned by a corporation, the board of directors of the corporation.

What must the Report contain?

The report must,

- (a) list the requirements of the Act, the regulations, the system's approval and any order that the system **failed to meet** at any time during the period covered by the report and specify the duration of the failure; and
- (b) for each failure referred to in clause (a), describe the measures that were taken to correct the failure.

The following table lists the requirements that the system failed to meet and the measures taken to correct the failure:

Drinking Water Legislation	List the requirement(s) the system failed to meet	Specify the duration of the failure (i.e. date(s))	Describe the measures taken to correct the failure	Status (complete or outstanding)
Safe Drinking Water Act	Not Applicable		L. L	
Ontario Regulations (eg. O. Reg. 170/03, O. Reg. 128/04, O. Reg. 903	on April 14, 2009, were not analyzed for alkalimity.		Future samples were tested for alkalinity per the Regulation	Complete
System Certificate of Approval No. 0177- 6AZL3J & 4447-6L6KUF	Certificate of Approval No. 8455-78JQPA, requires an inspection schedule, defined well inspection and maintenance procedures and remedial action plans for all wells associated with the water treatment system. The operating authority (OCWA) has this in place for the production well (Wells No. 1 and 3). The owner does not have this type of system in place for the PTTW monitoring wells (Domestic well #3, TW 05-01, TW 05-02). It is expected that these monitoring wells will be added to the well inspection schedule prior to next year's inspection.	May 13. 2009	The owner has developed and implemented an inspection schedule	Complete

What else must the Report contain?

The report must also include the following information for the purpose of enabling the owner of the system to assess the capability of the system to meet existing and planned uses of the system:

- 1. A summary of the quantities and flow rates of the water supplied during the period covered by the report, including monthly average and maximum daily flows and daily instantaneous peak flow rates.
- 2. A comparison of the summary referred to in paragraph 1 to the rated capacity and flow rates approved in the system's approval.

December	15623	504	619	1633	12.8	18.9		

The above table shows that there were no exceedances of the quantity of water supplied during the reporting period, or of the maximum design rated capacity.

When Does the Report Get Submitted?

If a report is prepared for a system that supplies water to a municipality under the terms of a contract, the owner of the system shall give a copy of the report to the municipality by March 31.
